## WHAT IS CLAIMED IS:

- 1. The positive-type photosensitive composition comprising alkaline soluble organic high molecular substance comprising epoxy resin having phenolic hydroxyl group or reacted with phenolic hydroxyl group and photo-thermal conversion substance for absorbing infrared rays of an image exposing light source and converting it into heat, and as adherence characteristic reforming agents, the composition includes any one of
  - (1) polyvinyl polypyrrolidone/polyvinylacetate copolymers
  - (2) polyvinylbutyral
  - (3) styrene/maleic acid copolymers
  - (4) vinylpyrolidone/dimetylaminoetylmethacrylate copolymers
  - (5) terpolymers of vinylpyrrolidone/caprolactam/
  - (6) terpenephenolic resin
  - (7) alkylphenolic resin
  - (8) polyvinylformar resin
  - (9) melamine/formaldehyde resin
  - (10) polyvinyl acetate, and
  - (11) ketone resin.
